

Redundant Material & Recycling Policy

ABS Solutions recognise their responsibilities to maintaining an effective control over redundant and waste materials generated in the course of their business processes both at Clients and their own Perth Office facilities.

The methodology used at their Clients facilities is to comply with the Worksite Standards for both Redundant Material and Recyclable Waste as detailed in the Clients Procedures.

The methodology used at **ABS Solutions** facilities is one that sees redundant site generated returned material sorted into either reclaimable or recyclable.

Material which is deemed to be neither will be treated as waste and disposed of through the Local Council waste removal system.

All efforts will be made to identify, separate and recycle waste as generated in the day to day operations conducted in the Perth facilities.

This policy is seen as part of **ABS Solutions** commitment to maintaining a clean Environment.
